

Use '6' or SHIFT, '6' to step thru' jobs

LIST station names, and select one

The Shift key works with the orange keys (2,4,6,8) as arrow keys to move the cursor on screen.  
If the 2,4,6,8 keys don't seem to work at any stage, press the Shift key to get the required input.  
Input the co-ordinates of Stn. A

OR, Input a new station with co-ords

Enter backsight point ID or LIST F2

Step thru' list of points (6) or Search F2

Turn telescope until dHz=0,

select F1

Point telescope at target, F3

Move target and re-MEAS F3 until d.HD=0
