TLDR: There is no better surveying investment than the **Geomax FieldGenius Premium v7 Software** on **Getac PS336 Datalogger**

We've all been there: it's been 2 months since you last used the total station, you take it out, set it up and you wonder where to start (does OCC. PT. mean station on a point or something else?), or you're half through the survey and realise you forgot to check the prism offset.

Or you are going to set out a building site and you find yourself wasting time tapping in one setting co-ordinate after another.

Now you need never get stuck in this position again.

With the new **Geomax FieldGenius software** on a Getac PS336 datalogger connected to your total station you can:

- Follow the **intuitive menu system** to station your instrument
- Select features from the feature library for lines (roads, kerbs, buildings...) or points (manholes, trees, lamposts...)
- See **everything in the MapView** on screen as you carry out your survey (including the instrument settings: prism type, height of target, line code...)
- Edit lines and points on screen with the tap of the stylus
- Output the survey **direct to Autocad** (by USB memory stick) when you're finished complete with layers for roads, utilities, greenery...

or if you want to **set out**:

- Load the drawing **direct from Autocad**
- Follow the easy-to-use menu for **freestationing**
- Tap the line or point on the screen that you want to set out
- Follow the directions on screen from prism view (for 1-man robotic total stations) or from instrument view (for 2-man system) to the set out point
- Record the actual position of the point set out for **quality control** records.

Unique features with **Geomax FieldGenius**

- It connects to **any make or model of instrument**, total station or GPS (Topcon, Leica, Trimble, Sokkia, Pentax, Nikon, CST/Berger, Geodimeter, Kolida, South, Stonex, Zeiss, FOIF)
- Use it on your total station and your GPS rover
- Add **contours** to your survey in the field
- Calculate areas & **volumes** in the field
- Use the **Road Manager** for setting out road lines & offsets
- Intuitive easy-to-use menu system.

**Geomax FieldGenius Software & Getac PS336 Datalogger c/w charger, stylus  
€2,750+VAT**

**Special offer for orders received to 20th June 2015:**

**We will calibrate you total station free - value €200+VAT**

Stop wasting time and making mistakes surveying and setting out, get the Geomax FieldGenius software today, ring Philip 087-6823336 with queries.

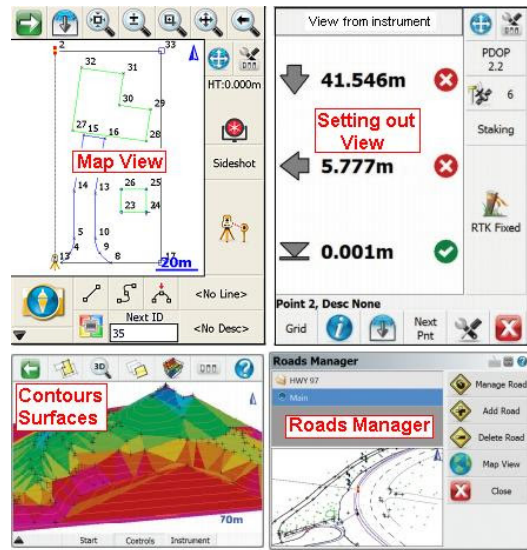

**Rugged IP68 Getac PS336 with Geomax FieldGenius Software on board**
