AiM Sensitivity

Created: 20191104_DL

You can set up the sensitivity of AiM360 in different modes depending on the environment you are working in. To get to that setting go to robotic settings:

In survey screen>Lock/Unlock>Settings>AiM360 mode

Low visibility environment examples: fog, rain, mist, snow, dust

High reflectivity environment examples: lot of windows, glass, mirrors, motorway with cars with LED lights, a lot of reflective stickers/targets
